## BAB I

PENDAHULUAN .............................................................. 1

1.1 Latar Belakang Masalah ........................................... 1

1.2 Rumusan Masalah ................................................... 3

1.3 Batasan Masalah ..................................................... 3

1.4 Tujuan .................................................................. 4

1.5 Sistematika Penulisan ............................................. 4

## BAB II

LANDASAN TEORI ........................................................ 6

2.1 AGV (Automated Guide Vehicle) .................. 6

2.2 Mecanum Wheel Robot ......................................... 7
2.2.1 *Mecanum-directional Robot* Robot ..................................................7

2.3 *ARM CortexM4 (STM32F4 Discovery)* .................................................9

2.3.1 Pengertian ARM CortexM4 ...............................................................9

2.3.2 Arsitektur STM32F4 Discovery .........................................................10

2.4 *Rotary Encoder* ..................................................................................13

2.4.1 Rotary Encoder Omron E6A-2C .........................................................13

2.5 *RFID (Radio Frequency IDentification)* ............................................14

2.5.1 RFID ..................................................................................................14

2.5.2 RFID Reader ID-12 ..........................................................................16

2.6 Sensor Pengikut Garis ...........................................................................19

2.6.1 Photodiode .......................................................................................19

2.7 Katup pneumatic (Valve) ......................................................................20

2.7.1 Valve ..............................................................................................20

2.8 *Air Cylinder* ......................................................................................22

2.8.1 *Cylinder Double Acting* ...............................................................22

2.9 *Driver Motor* ......................................................................................23

2.9.1 *EMS H-Bridge 30A* .....................................................................23

**BAB III**

**METODE PENELITIAN** ...........................................................................25

3.1. Model Pengembangan .........................................................................25

3.2. Prosedur Penelitian ...........................................................................25

3.3 Diagram Blok Sistem ...........................................................................27

3.4 Perancangan Mekanik Robot ..............................................................28

3.4.1 Ukuran dimensi *Mobile Robot* .......................................................28
3.4.2 Struktur Material *Mobile Robot* ..........................................................29
3.4.3 Perancangan *Minimum System* ..........................................................29
3.4.4 *ST-Link Downloader* .................................................................32
3.4.5 *Driver Motor* ..............................................................................35
  3.4.5.1 *Konfigurasi Pin* .....................................................................35
3.4.6 *RFID Starte Kit ID12* .................................................................38
3.4.7 Prosedur Testing ............................................................................39
3.4.8 Optocoupler ..................................................................................40
3.4.9 Sensor photodiode ..........................................................................41
3.5 Perancangan Perangkat Lunak ............................................................42
  3.5.1 Program Membaca Sensor rotary encoder. .................................47
3.5.2 Program Pembacaan RFID ..........................................................49
3.5.3 Program pembacaan sensor photodiode .......................................50
3.6 Metode Pengujian dan Evaluasi Sistem ..............................................52
  3.6.1 Pengujian dan Evaluasi Minimum Sistem ....................................52
  3.6.2 Pengujian dan Evaluasi Sensor Rotary Encoder ............................52
  3.6.3 Pengujian dan Evaluasi *Motor DC* ..............................................53
  3.6.4 Pengujian dan Evaluasi Program Sensor photodiode ...................53
  3.6.5 Pengujian RFID Reader ..............................................................53

BAB IV

**PENGUJIAN SISTEM** ........................................................................54

4.1. Pengujian *Minimum System* ..........................................................54
  4.1.1. Tujuan ......................................................................................54
  4.1.2. Alat yang Digunakan ..............................................................54
4.1.3. Prosedur Pengujian .................................................................54
4.1.4. Hasil Pengujian .................................................................55

4.2. Pengujian Driver Motor ............................................................57
4.2.1 Tujuan .................................................................................57
4.2.2 Alat yang Digunakan ........................................................57
4.2.3 Prosedur Pengujian ...........................................................57
4.2.4 Hasil Pengujian .................................................................58

4.3. Pengujian Sensor Rotary .........................................................59
4.3.1 Tujuan .................................................................................59
4.3.2 Alat yang Digunakan ........................................................59
4.3.3 Prosedur Pengujian ...........................................................60
4.3.4 Hasil Pengujian .................................................................60

4.4. Pengujian RFID Reader .........................................................65
4.4.1 Tujuan .................................................................................65
4.4.2 Alat yang Digunakan ........................................................65
4.4.3 Prosedur Pengujian ...........................................................65
4.4.4 Hasil Pengujian .................................................................66

4.5. Pengujian Sensor Photodioda .................................................66
4.5.1 Tujuan .................................................................................67
4.5.2 Alat yang Digunakan ........................................................67
4.5.3 Prosedur Pengujian ...........................................................67
4.5.4 Hasil Pengujian .................................................................67

4.6. Pengujian Keseluruhan Sistem Pada area simulasi parkir ..........68
4.6.1 Tujuan .................................................................................68
4.6.2 Alat yang Digunakan.................................................................68
4.6.3 Prosedur Pengujian .................................................................69
4.6.4 Hasil Pengujian .................................................................69

BAB V
PENUTUP .........................................................................................72
  5.1. Kesimpulan ...........................................................................72
  5.2. Saran ...................................................................................72
DAFTAR PUSTAKA ...........................................................................74
LAMPIRAN ...................................................................................76
BIODATA PENULIS ......................................................................120
